

CANADA'S NEW
DEVELOPMENT

After the War a Period of Prosperity.

It is evident that the Government of the Dominion in its programme of reconstruction and development is undertaking a work of tremendous importance. There will be available the labor for work that has been silent since 1914, and the rehabilitation of this labor will entail the thought and energy of most capable hands. The transition period from war to peace will be rapid and thorough, and instead of Canada sinking into a state of lethargy, there will be a continued period of wakefulness that will give employment to the unemployed, and render to the capitalist and producer ample return for his money, effort and enterprise.

The agricultural potentialities of the great Canadian West possess incalculable acres of the best of soil, capable of producing millions of bushels of the best of grain. The cost of growing this is lower than any place on the continent. There will be a greater demand than ever for these lands, the consequent production will be heavier and the profits attractive. Cattle industry will be one of the chief developments, and the encouragement of it will be in the continued high prices that beef products will bring. European countries have been depleted of cattle, and the demand for beef, cattle and dairy products will tax the efforts of the producer for years to come.

Western Canada offers unequalled opportunities for development in this line.

In the Canadian West plans are being laid for the development of electrical power which can be produced cheaply. There is an abundance of coal and water power that could be used in developing this useful energy. What cheap power produced in this way will mean to the farmer and development of industrial enterprises cannot be estimated in figures.

More extensive development of the water power at Niagara, on the St. Lawrence and at waterfalls all over the country, is ready to be launched.

Peace will see new mine fields opened up, and it is equally certain that shipbuilding, railway equipment, steel production, and many of the industries will go forward with a bound.

Canadian industries will be required in the reconstruction of Europe, and already the Canadian Government has sent across the seas a commission for the purpose of securing orders. Canada took an early and prominent part in the war, and in the days of peace will be found equally active. She feels that by the valor and loyalty of her people she has earned a large share of the business and prosperity that will follow the war period, and she proposes to get it.—Advertisement.

No Chatter, This!
Furthermore, why do they call an ear-splitting whistle a "siren"? Our understanding of a siren is that it doesn't try to get away from her.—Galveston News.

KIDNEY TROUBLE NOT
EASILY RECOGNIZEDApplicants for Insurance Often
Rejected

An examining physician for one of the prominent life insurance companies, in an interview of the subject, made the astonishing statement that one reason why so many applicants for insurance are rejected is because kidney trouble is so common to the American people, and the large majority of those whose applications are declined do not even suspect that they have the disease.

Judging from reports from druggists who are constantly in direct touch with the public, there is one preparation that has been very successful in overcoming these conditions. The mild and healing influence of Dr. Kilmer's Swamp-Root is soon realized. It stands the highest for its remarkable record of success.

We find that Swamp-Root is strictly an herbal compound and we would advise our readers who feel in need of such a remedy to give it a trial. It is on sale at all drug stores in bottles of two sizes, medium and large.

However, if you wish first to test this great preparation send ten cents to Dr. Kilmer & Co., Binghamton, N. Y., for a sample bottle. When writing be sure and mention this paper.—Adv.

The Name Gutta Percha.
Gutta percha derives its name from the Malay word gutta, a gum, and percha, a cloth. It was introduced to the civilized world in 1842 by Doctor Montgomery, a Scottish surgeon.

Cuticura for Sore Hands.
Soak hands on retiring in the hot sud of Cuticura Soap, dry and rub in Cuticura Ointment. Remove surplus Ointment with soft tissue paper. For free samples address, "Cuticura, Dept. X, Boston." At druggists and by mail. Soap 25, Ointment 25 and 50.—Adv.

Conditional.
Milliner—"I know that hat would please your husband." Customer—"Not unless you took \$20 off the price."

When Baby Is Coughing.
GROVER'S BABY BALM. It will soothe the throat and loosen the chest. Perfectly harmless. See directions on the bottle.

The Right Place.
"Pop, why do they have cages for prisoners?"
"To put the birdmen in, my son."

Mince pies can be made without meat and with plainer crust if you wish to economize.

Your Eyes
A Wholesome, Cleansing, Refreshing and Healing Lotion—Murine for Redness, Soreness, Granulation, Itching and Burning of the Eyes or Eyelids. "2 Drops" After the Movies, Motorcar or Golf will win your confidence. Ask Your Druggist for Murine when your Eyes Need Care. —M. L. Murine Eye Remedy Co., Chicago

Our Part in Feeding the Nation

(Special Information Service, United States Department of Agriculture.)

FARM HOMES NEED GOOD WATER SYSTEMS.

Illustrating Common but Unsafe Location of the Farm Well and Spring. Possible Source of Pure Water Also is Indicated. A, Unsafe Well; B, Unsafe Spring; C, Privy; D, Garden; E, Chicken Yard; F, Hog Yard; G, Cultivated Field; H, Pasture; J, Woodlot Fenced Off and Kept Clean; Here, Beyond the Probable Channels of Impure Drainage, May Be Pure Water.

FOUR UTILITIES
NEEDED ON FARMGood Water Is One of Prime
Essentials for Safe and
Comfortable Living.

LIGHTING ALSO NECESSARY

Surface and Underground Drainage
Should Be Considered in Locating
Wells to Avoid Contamination
—Wood Lot Desirable.

A good water supply, a complete sewage-disposal plant, and effective heating and lighting systems constitute the four prime utilities of the farm home, the foundations of safe, comfortable living. To secure these in greatest measure, thought and planning are necessary. If the procedure is haphazard, if the parts are not correlated, there is neither economy in the construction nor satisfaction in the operation of the plant.

When locating the well, the direction of surface and underground drainage should be considered, to the end that the water supply may not be contaminated by the sink drain, cesspool, or other sources of filth. The unused water from a spring or flowing well may be made valuable if brought to a watering trough, cooling tank, fish pond, or swimming pool, or harvested as ice. A saving may be effected by laying two lines of pipe in one trench. The engine which drives the pump may operate other useful appliances, such as a dynamo, saw, washing machine, cream separator, or churn.

A notable example of home-planned utilities is found upon a farm in northern Utah. By personal planning and hard work, the owner of this farm gradually has equipped his home with a pressure water system, a laundry containing a power washing machine, wringer, mangle, and drying machine, a heating plant, electric lights, electric range, electric heaters for emergency use in chambers, and a vacuum cleaning system.

Sanitary Farm Water Supply.
Observation indicates that on the average three out of four farm wells are located within 75 feet of the back door of the house and in the direction of the barn. That convenience and first cost—not safety—have been the deciding factors in thousands of such locations is a fact made evident by the proximity of barnyards, pig pens, pastures, fertilized fields, sink drains, privies, cesspools and house yards rendered insanitary by chickens, slops, garbage, and other filth. Too frequently the leach from these or other sources of filth, after joining the ground water, moves with greater or less directness to wells and springs, seriously impairing the water supply by organic impurity or grossly poisoning it with human sewage.

Among other ways by which surface waters and open or poorly covered wells and springs are contaminated or receive noxious substances are: Surface wash from roads, ranges, or the other sources of filth above mentioned; bodily entry of stock and poultry or their droppings; filth from the shoes of careless farm hands and children; drippings from the dipper or bucket handled by carriers of disease; dust and leaves from the air; and entry of worms, bugs, spiders, toads, frogs, mice, snakes, cats, or other animal life, which through death and decomposition may impart to the water disagreeable odor and taste and perhaps more serious characteristics.

Deterioration of water may be due to still other causes that make it unwholesome but not, so far as known, destructive of health. Among such are unusual dissolving of mineral salts from the earth, washings from clay that produce a milky appearance, discoloration from mineral or vegetable matter, admixture of mineral or vegetable oils, absorption of offensive

gases, low forms of animal life, minute plant growths often productive of bright-colored, fibrous masses and scums, and especially when water is of peaty or swampy origin, impregnation with iron. In short, investigations indicate that only a small minority of farm water supplies can be classed as unqualifiedly safe and desirable.

Diseases From Poor Water.
Among the ailments caused or influenced by contaminated water are typhoid fever, tuberculosis, hookworm disease, cholera, dysentery and diarrhea, and certain obscure maladies that may be traced eventually to the poisonous effects of drainage from human wastes. Figure 2 shows in a striking manner how increased use of pure water in Massachusetts has been followed by decline in the typhoid-fever death rate. Frequently a home or village supplied with water from a mountain spring or canyon is a center of goiter, although the possible relationship of such water to this disease has not been proved conclusively.

Among ailments of live stock, hog cholera, anthrax, and foot-and-mouth disease are spread by moving water. Hence sick animals should not have access to streams, and dead animals should not be left exposed in fields or buried where drainage may carry infection to streams and water supplies. One's duty to himself and neighbors should obligate him to confine all sick animals and burn the carcasses of dead ones or bury them deeply in spots remote from streams, wells and springs, and urge his neighbor to do the same.

The vital things to remember are that ground water is not stagnant but moves usually, though not always, with the "lay" or slope of the land; that its character determines largely the character of wells and springs; that it is not an inexhaustible reservoir, but that a given well yields only as it receives; and that continued pumping will not improve the water in a well if the sources from which it is fed are permanently at fault. In short, ground water is natural drainage variously modified in its movement and character by subterranean conditions.

Water for domestic use should be clear, lustrous, odorless, colorless, wholesome, soft, neither strongly acid nor alkaline, and its temperature for general farm purposes should be about 50 degrees F. These characteristics, however, must never be deemed proof of purity, for a glass of water may possess them and yet contain millions of disease-producing germs. Any suspicious water should be rejected until both the water and the surroundings where it is obtained are passed upon by competent sanitation authority, generally the state board of health.

As yet the soy bean is troubled by few serious enemies.

A full smokehouse is one of the best evidences of thrift.

Haul all implements into the machine shed as soon as work with them is over.

Management of barnyard manure on farms differs greatly in the same locality and the best yields are usually found where it is given the best care.

By using the tractor the farmer is enabled to take advantage of the more seasonable times for particular operations.

GENERAL FARM NOTES

SALVAGING
MAN POWER
for PEACE

William Harper Dean

Reclamation of
Mutilated Soldier
One of Miracles
Born of War

THE fighting man who "gets it" and then "goes west" is missed by his trenchmates, the one who gets a nice, clean wound is envied, but the man who is struck by flying steel and leaves the lines to emerge from the hospital a legless, armless or sightless by-product of war is pitied from the depths of his comrades' hearts.

Artillerymen pray that when they are hit they will not be mutilated for life; so do infantrymen. For they sicken at the thought of passing the remainder of their days a burden to themselves and others, objects of pity and charity. Death is the least toll of war.

But now comes the miracle, just another which has been born of the most colossal war: The reclamation of the mutilated man, the refitting of him to return to civil life the worker of his own destiny, without aid of charity or pity or pension. The armless will return to their trades and professions, the blind will work alongside the sighted by grace of a superdeveloped seventh sense, the legless may take up their work where they left it to join the colors, or else equip themselves for a new job in life and ask no special concessions from their whole-limbed competitors nor from any man.

More Than Makeshift.
Mechanical ingenuity has devised the artificial arm and leg which is something more than a makeshift for partially concealing the loss of a limb. With sufficient training in its use a man equipped with such an arm can shave himself with an open razor, a feat which many a man with both arms intact will not attempt.

He can grasp a whetstone and sharpen a scythe or hold a delicate tool at a lathe for work demanding the finest precision. From his new training the blinded man emerges capable of efficient work at the same lathe or making furniture in open competition with employees with unimpaired sight. It all rests with the individual—whether he applies himself with new hope and enthusiasm to the task of refitting himself for a productive, useful career.

France furnishes well nigh innumerable examples of the new surgery and the new training of men who to all intents and purposes have been handicapped for life. Throughout the republic re-educational schools for mutilated men have been established and are graduating men and returning them to the channels of peace time occupations at a marvelous rate.

A mutille who has lost his right arm is set to work performing simple exercises with his left, such as cutting out squares and ovals from sheets of thin copper. After five or six weeks of this elementary training in any American Red Cross or French re-educational school, his left hand begins to develop some of the skill looked for from a man's right arm. Soon he is able to write with his left, and eventually he forgets the loss of the other member.

Time and Patience Needed.
Then comes the attachment of the ingenious mechanical arm to the stub of his right. It takes time and patience to learn to operate its springs and levers and clamps, for every operation must be managed from the shoulder and remaining section of the arm. To the "wrist" of this artificial member

the mangle learns to do the work of a right hand. The significant feature of it is France, for instance, is that these men emerge from the welter of hell, minus arms and legs, sometimes blind, to return to civil life better equipped than in prewar days.

The education of the French peasant in the past has been largely a matter of utilizing ancient methods. Men have plowed with oxen because their grandfathers did; neither had the advantage of training in advanced agriculture. But the peasant who leaves the soil is no longer content to farm in the old way.

The Great Awakening.
He has learned the economy of tractor plowing and of seed drills and of manure spreaders. He has learned the principles and practical side of

being named, they christened the sea into which he fell the Jearian sea. A board of investigation appointed to investigate the cause of the accident made findings that the wings had come off probably "due to the intense heat of the sun melting the wax which held them firmly to his body."

Insects Have Short Life.
As Hearn truly said, the incidents of the insect world are mostly of a nightmare character—witness the nuptial flight of the bee and the devoted

needed, but the old rule of plenty of sleep holds good. Sufficient sleep is more conducive to good looks than any artificial means yet discovered by the beauty doctors. If you wish to keep your eyes bright and your face unlined, obey the eight-hour rule for sleep.

Female of the Species.
Only the female spiders spin webs. They own all the real estate, and the males have to live a vagabond life under stones and in other obscure hiding places. If they come about the house

so often as to bore the ruling sex they are mercilessly killed and eaten. The spider's skin is as unyielding as the shells of lobsters and crabs, and is shed from time to time in the same way, to accommodate the animal's growth. If you poke over the rubbish in a female spider's back yard, among her cast-off corsets you will find the jackets of the males, who have paid for their sociality with their lives— trophies of her barbarism as truly as scalps show the savage nature of the red man.

ing by the female spider of her bridegroom. Whether they have wings or stings or both or none, theirs is the life of the prey or the preyed upon and they can defend themselves feebly only by protective coloring, or perhaps an unpleasant taste which makes them inedible to birds that would otherwise eat them. Whether they creep on the ground or appear to flutter joyously among the flowers, their struggle for existence is fierce and incessant. Thus does stark science brush away the fuzzy fancies of a sentimental older era.

First Flyer

Aviation was born in ancient Greece, observes Camp Kelly Field Eagle. Digging down into the depths of bookery they have found that Icarus was the original boy aviator, and though he fell to his death in his first solo flight, there was no flying field named after him simply because in the golden days of Greek mythology the nations had not gone in seriously for aviation. However, since there were no fields to

Eight-Hour Law
Too often a girl who has natural beauty in her youth squanders it prodigally, keeping late hours, over-exercising and eating irregularly food that is rich, but not particularly nourishing. Health and strength are the props on which beauty depends for success, and when inroads are constantly made on these it quickly fades. To continue in the possession of health and strength no new laws are

MANY TRADES OPEN TO MEN WHO HAVE LOST BOTH LEGS

EACH WORKER IN THIS FIELD IS EQUIPPED WITH ARTIFICIAL ARM OR LEG

ARTIFICIAL LEG DOES NOT MAKE THIS FARM WORKER HELPLESS

modern dairying and orcharding. He will not be satisfied to use his new arm or leg as he used the old. It has been the great awakening for him and his kind, and unconsciously or purposely he will spread the contagion of the new order of things in the midst of the old.

Industry throughout the world must not close its eyes to the inevitable fact that following the war re-equipped men who have sacrificed sight and limbs for their country will come back to take their places alongside the whole. They will come back efficient men, asking no sympathy, asking no special concessions from employers or those with whom they work shoulder to shoulder. The world is not going to be flooded with idle, saddened objects of pity and charity. That, too, belongs to the old order of things.

In the readjustment of every nation's economic and industrial life following the demobilization of the armies the men reclaimed from mutilation will demand and receive their full share of the task.

This is one of the war's most sublime achievements, second only to the everlasting defeat of military anarchy.

Idealism
We cannot get away from idealism any more than we can from character, nor from an idealism based on knowledge. The problem will be as it always has been, one of making it helpful and fruitful, and enlisting it in the service of man. It cannot serve man except through other men, and as applied by them. The greatest ideal ever revealed to the world was the ideal of service. There could have been none greater. Christian people certainly will not deny this, for it is one of the basic truths of their religion. Idealism, service and obedience, therefore, all go together, and are all necessary elements of a symmetrical character. They will not lose their importance or value. We cannot think of men living together in a civilized society without them. For, lacking them, men would not be men, and society would not be civilized.—Boston Globe.

Belgium's Independence.
More than 75 years ago Belgium declared her independence of Holland, to which she had been united by the settlement of 1815. Long-standing dissatisfaction first broke into open rebellion on the night of August 25, when the performance of the opera "La Muette de Portend," with its passionate appeal for emancipation, inflamed the audience to such a degree that the people left the opera house and flew to arms. Europe regarded the outbreak as merely a local riot until a month later, when the Dutch army sent to establish order in Brussels was led into a trap from which it extricated itself only after four days' heavy fighting and the loss of 1,500 men. Immediately on the withdrawal of the defeated troops a provisional government was assembled and on October 4 Belgium was proclaimed an independent state.

Many of our American women were unable to take up the duties of nursing at the front, but they should know how to take care of their own at home, and for this purpose no better book was ever printed than the Medical Adviser—a book containing 1,008 pages, and bound in cloth, with chapters on First Aid, Bandaging and care of Fractures, Taking care of the Sick, Physiology, Hygiene, Sex Problems, Mother and Babe, which can be had at most drug stores, or send 50 cents to the publishers, 663 Main St., Buffalo, N. Y.

The women at home, who are worn out, who suffer from pain at regular or irregular intervals, who are nervous or dizzy at times, should take that reliable, temperance, herbal tonic which a doctor in active practice prescribed many years ago. Now sold by druggists, in tablets and liquid, as Dr. Pierce's Favorite Prescription. Send 10c to Dr. Pierce's Invalids' Hotel, Buffalo, N. Y., for trial package.

Wilmington, Del.—"When I was a girl at home, my mother always relied on Dr. Pierce's Favorite Prescription. It never failed to build her up and make her strong, when in a run-down state."

It was in a miserable, run-down condition, I was weak and nervous and suffered from aches and pains all over. Knowing how Favorite Prescription had helped my mother I decided to take it, and found it excellent. It built me up to better health than I had been for a long time. "I shall always recommend the 'Prescription' to women who are ailing."—Mrs. Alexander Morton, 337 Kirkwood St.

To Water Hanging Plant.
Place a small funnel in the center of the basket, leaving the cup part above the soil, but hidden by the foliage. Fill this with water daily. The water will soak into the soil gradually and will not run through onto the floor below, spoiling carpets or waxed floors.

How's This?
We offer \$100.00 for any case of catarrh that cannot be cured by HALL'S CATARRH MEDICINE. HALL'S CATARRH MEDICINE is taken internally and acts through the blood on the mucous membrane of the system. Sold by druggists for over forty years. Price 75c. Testimonials free. F. J. Cheney & Co., Toledo, Ohio.

Religious.
Two shipwrecked sailors were feeling very miserable on a desert island, pinched with hunger and cold. The one more wretched than the other said to his companion:
"Can you pray, Bill?"
"No."
"Can you sing?"
"No."
"Well," said the first, "let's have something religious—let's have a collection."

No Worms in a Healthy Child.
All children troubled with worms have an un-healthy color, which indicates poor blood, and as a result, there is more or less stomach disturbance. GILSON'S CASTLEBERRY CHERRY TONIC given regularly for two or three weeks will enrich the blood, improve the digestion, and act as a General Strengthening Tonic to the whole system. Mothers will throw off or dispel the worms, and the child will be in perfect health. Pleasant to take. 50c per bottle.

Crushed.
Artist—Just a little dab of mine, you see, madam.
Lady—You are entirely too modest. I call that quite a big dab.

Annot the eyelids with Roman Eye Balm at night, and in the morning observe the refreshed and strengthened sensation in your eyes. Adv.

An act of heroism is temporary while an act of charity is everlasting.

All yellow flame on the gas range is practically wasted.

Look out for Spanish Influenza.

At the first sign of a cold take

CASCARA QUININE

Standard cold remedy for 20 years—in tablet form—safe, sure, no opiates—breaks up a cold in 24 hours—relieves grip in 3 days. Money back if it fails. The genuine bottle has a Red Star with Mr. Hill's picture. At All Drug Stores.

AIRPLANES Won the War

Mr. R. T. Wright, of 333 Archella St., Knoxville, Tennessee, has been awarded a prize of \$10,000 for his invention of a new type of airplane. Wright's airplane is a biplane, and is capable of flying at a speed of 100 miles per hour. It is a very simple and practical design, and is easy to operate. Wright's airplane has been tested successfully, and it is expected that it will be put into production soon.
